Engineer Name: Samantha Chorm

Project/program description: The program will read the sales data from SalesFile.txt, prompt the user for the division number (1-6), then output the sales then total sales for that division.

Test Case #1: Enter Division 3 to display the 4 quarterly sales and total division sales.
Expected Test Results: Displays Quarter 1-4 sales ($1350.09, $1351.10, $1352.11, $1353.12) and total sales of $5406.42.
Actual Test Results: Matches expected result.

Test Case #2: Enter Division 6 to display the 4 quarterly sales and total division sales.
Expected Test Results: Displays Quarter 1–4 sales ($1650.21, $1651.22, $1652.23, $1653.24) and total sales of $6606.90.
Actual Test Results: Matches expected result.

Test Case #3: Enter 0 to exit the loop and display total corporate sales.
Expected Test Results: Program outputs Total corporate sales: $33639.00 and terminates execution.
Actual Test Results: Matches expected result.

Test Case #4: Verify that calling getCorpSales() from different array elements (divisions[0], divisions[3], divisions[5], etc.) all return the same corporate sales value.
Expected Test Results: divisions[0].getCorpSales(), divisions[3].getCorpSales(), and divisions[5].getCorpSales() all return $33639.00.
Actual Test Results: Matches expected result.

Test Case #5: Select Division 1 and verify that getDivSales() returns the exact sum of the 4 quarter array elements (qtrs[0] through qtrs[3]).
Expected Test Results: qtrs[0] ($1150.01) + qtrs[1] ($1151.02) + qtrs[2] ($1152.03) + qtrs[3] ($1153.04) = 4606.10.
Actual Test Results: Matches expected result.

Test Case #6: Select Division 2 and verify that all values match the second row of SalesFile.txt.
Expected Test Results: qtrs[0] = 1250.05; qtrs[1] = 1251.06; qtrs[2] = 1252.07; qtrs[3] = 1253.08
Actual Test Results: Matches expected result.

Test Case #7: Enter any out-of-bounds integer such as 7 or -1 when prompted for a division.
Expected Test Results: Displays error message: "Invalid input; please enter a number from 1 to 6," then reprompts.
Actual Test Results: Matches expected result.
